ASTM C185

Standard Test Method for Air Content of Hydraulic Cement Mortar

Understanding ASTM International Test Procedures for Cement and Concrete - Staying Up to Standard

CTLGROUP

Scope/Significance and Use

▸ **Scope:** This test method covers the determination of the <u>air content of hydraulic cement mortar</u>.

▸ **Significance and Use:** The purpose of this test method is to determine whether or not the hydraulic cement under test <u>meets the air-entraining or non-air-entraining requirements</u> of the applicable hydraulic cement specification for which the test is being made. The air content of concrete is influenced by many factors other than the potential of the cement for air entrainment.

CTLGROUP

Summary of Test Method

▸ Prepare a <u>mortar</u> with <u>standard sand</u> and the <u>cement</u> to be tested, using a <u>water content</u> sufficient to give a required <u>flow</u>.

▸ Compact the mortar into a measure of <u>known volume</u> and determine <u>mass</u>.

▸ <u>Calculate the air content</u> from the measured density of the mortar, the known densities of the constituents, and the mixture proportions.

CTLGROUP

Key Terminology

▸ <u>Air Content</u> - of freshly mixed mortar the volume of air (and other gases) in mortar, expressed as a percentage of total volume of mortar.
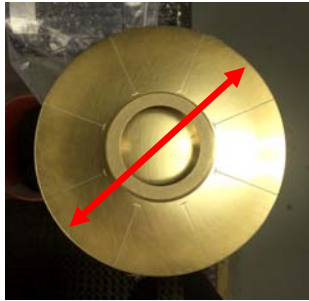

Source: ASTM C219

CTLGROUP

Apparatus

▸ Flow Table, Flow Mold, and Caliper

▸ Measure

▸ Mixer, Bowl, and Paddle

▸ Straightedge

▸ Weights and Weighing Devices

▸ Glass Graduates

▸ Tamper

▸ Tapping Stick

▸ Spoon

CTLGROUP

5/9/2016

Apparatus: Flow Table, Flow Mold, and Caliper (1/2)

▸ Flow Table

Diameter: 255 ± 2.5 mm

Raised Height: 12.7 ± 0.13 mm

www.CTLGroup.com

CTLGROUP

Apparatus: Flow Table, Flow Mold, and Caliper (2/2)

▸ Conical Mold and Caliper

Diameter Top: 70 ± 0.5 mm
Diameter Bottom: 100 ± 0.5 mm
Height: 50 ± 0.5 mm

Distance to Zero: 100 ± 0.25 mm

www.CTLGroup.com

**CTLGROUP**

6

Apparatus: Measure

▸ A cylindrical measure having an inside diameter of 76 $\pm$ 2 mm and a depth (approximately 88 mm) adjusted by standardization with water to contain 400 $\pm$ 1 mL at 23.0 $\pm$ 2.0 °C.

www.CTLGroup.com

CTLGROUP

Apparatus: Measure Calibration

www.CTLGroup.com

CTLGROUP

Apparatus: Straightedge

▸ A steel straightedge not less than 200 mm long and not less than 1.5 mm nor more than 3.5 mm in thickness.

www.CTLGroup.com

CTLGROUP

Apparatus: Tamper and Tapping Stick

▸ **Tapping Stick :** A piece of hard wood having a diameter of approximately 16 mm and a length of approximately 152 mm.

▸ **Tamper:** Conforming to the requirements of Test Method C109. The tamping face of the tamper shall be flat and at right angles to the length of the tamper.

www.CTLGroup.com

CTLGROUP

Apparatus: Other

▸ Mixer, Paddle and Bowl Shall Conform to Practice C305

▸ Weights and Weighing Devices Shall Conform to C1005

▸ Glass graduates of 250-mL capacity, conforming to the requirements of Specifications E438 and E694.

www.CTLGroup.com

CTLGROUP

Temperature and Humidity Requirements

▸ The temperature of the air and mixing water shall conform to the requirements of Specification C511.

  • Air – Temp. 23.0 ± 4.0°C

  • Mixing Water - shall be 23.0 ± 2.0 °C

▸ The relative humidity of the laboratory shall conform to the requirements of Specification C511.

  • Relative Humidity - not less than 50 %

www.CTLGroup.com
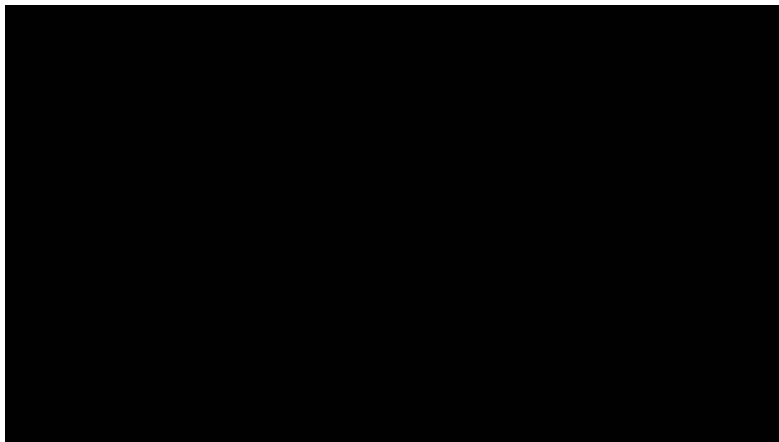

CTLGROUP

Procedure: Mixing

▸ Proportion the standard mortar using

- 350 g Cement
- 1400 g 20-30 Standard Sand
- Sufficient water to give a flow of 87 ½ $\pm$ 7 ½ %.

▸ Mixing Mortar per Practice C305

www.CTLGroup.com

CTLGROUP

Procedure: Flow Determination

www.CTLGroup.com

CTLGROUP
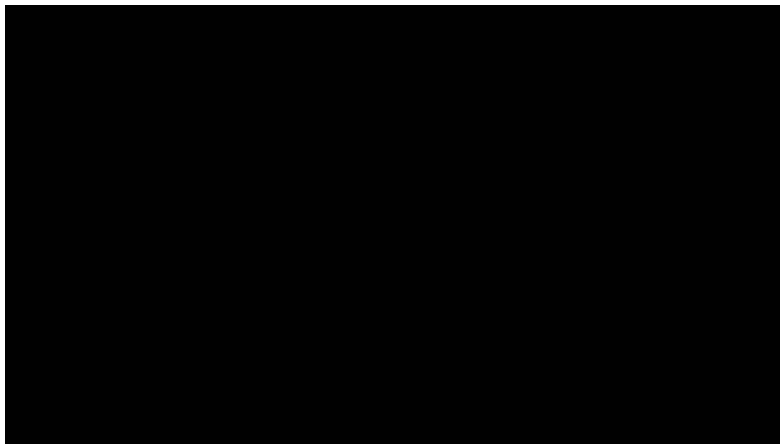

10

Procedure: Flow Determination

▸ Determine flow per ASTM C1437 and <u>Drop 10 times</u>

▸ Achieve Flow of <u>87½ ± 7½%</u>

www.CTLGroup.com

CTLGROUP

Procedure: Mass per 400 mL of Mortar

www.CTLGroup.com

CTLGROUP

Procedure: Mass per 400 mL of Mortar

1. Place Mortar in Three Equal Layers

2. Tamp each Layer 20 Times.

3. Tap the Sides of the Measure at Five Different Points.

www.CTLGroup.com

CTLGROUP

Procedure: Mass per 400 mL of Mortar

4. Cut off Mortar Plane with Sawing Motion with Straightedge or Trowel.

5. Wipe off Adhered Mortar and Water to Outside of Mold.

6. Determine Mass of Measure and Constituents.

www.CTLGroup.com

CTLGROUP

Calculation: Air Content

▸ Calculate the air content of the mortar, expressed as

▸ When,

- Portland Cement SG = 3.15
- 20-30 Standard Sand SG = 2.65

$$Air\ Content, volume\ \% = \ 100 \ - W\left[\frac{(182.7+P)}{(2000+4P)}\right]$$

W= Mass of 400 mL of Mortar, g
P = Percentage of Water(%)

www.CTLGroup.com

CTLGROUP

Calculation: Note 5

▸ When the hydraulic cement is other than portland, the appropriate value for its specific gravity shall be substituted for the value of 3.15 and the formula rederived accordingly:

$$Air\ content,\ volume\ \% = 100[1 - (W_a/W_c)] \qquad (2)$$

where:

W_a = actual mass per unit of volume as determined by this test method.

    = W/400 g/mL, where W is the mass in grams of the specified 400 mL of mortar (9.4),

W_c = theoretical mass per unit of volume, calculated on an air-free basis as follows and using the values for quantities of materials and specific gravities as given in 9.1 and 10.1,

$$= \frac{350+1400+350 \times P \times 0.01}{\dfrac{350}{3.15}+\dfrac{1400}{2.65}+\dfrac{350 \times P \times 0.01}{1}}$$

www.CTLGroup.com

CTLGROUP

13

Calculation: Note 5

$$= \frac{(5+0.01P)}{(1.827+0.01P)}, \text{ and}$$

P = percentage of mixing water, based on mass of cement.

Substituting for W_a and W_c we have:

$$\text{Air content, volume \%} = 100 \left(1 - \frac{W}{400} \times \frac{1.827+0.01P}{5+0.01P} \right)$$

$$\text{Air content, volume \%} = 100 - \frac{W}{4} \times \frac{(1.827+0.01P)}{(5+0.01P)}$$

$$\text{Air content, volume \%} = 100 - 2.5W \frac{(182.7+P)}{(5000+10P)}$$

$$\text{Air content, volume \%} = 100 - W \frac{(182.7+P)}{(2000+4P)}$$

www.CTLGroup.com

CTL GROUP

Limitations and Errors

▸ Room temperature should be well maintained as per test requirement.

▸ All apparatus used should be clean.

▸ Flow test drop 10 times.

▸ Don't use mortar from flow test.

▸ Don't forget to tap the sides.

▸ Do not over compress mortar.
